Production Supporting Systems in Factories

ระบบสนับสนุนการผลิตในโรงงานอุตสาหกรรม

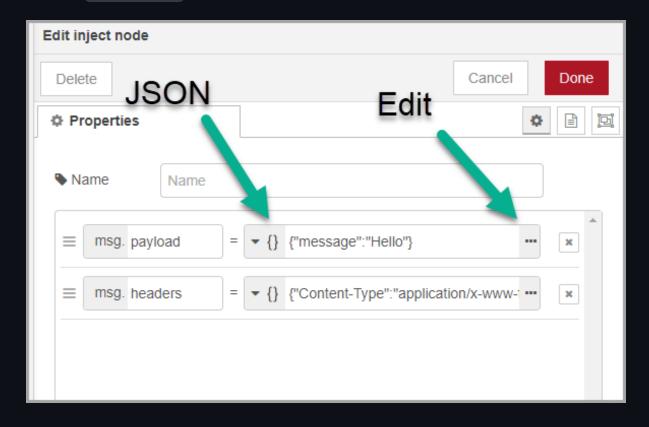

Line Notify

- สร้างกลุ่ม LINE ภายใน Group
- ไปที่ https://notify-bot.line.me/en/
 - Login (need to verify number on smart phone)
 - Go to My page
 - Click Generate token
 - Enter Token Name and select a chat room.
 - Copy the token and store it somewhere.

- Let send a line notification through Node-Red
 - Flow

• inject node

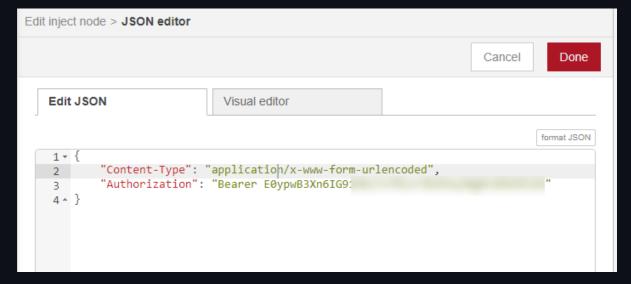

Set msg.payload to (JSON)

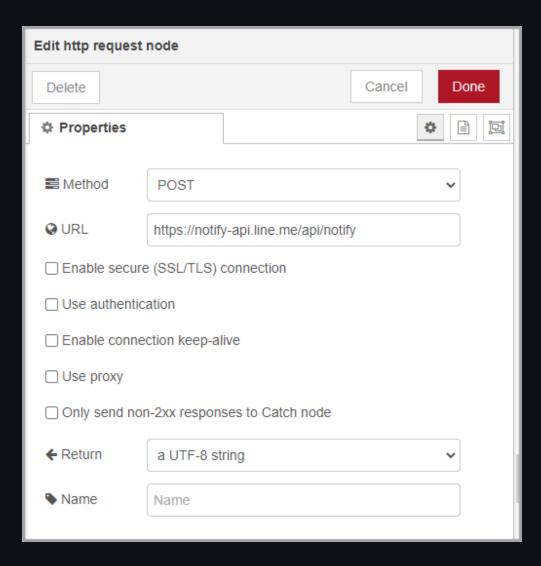

```
"message":"Hello"
Edit inject node > JSON editor
                                                                  Cancel
                                                                            Done
   Edit JSON
                            Visual editor
                                                                          format JSON
   1 - {
           "message": "Hello"
   3 4 }
```

Set msg.headers to (JSON)

```
{
   "Content-Type": "application/x-www-form-urlencoded",
   "Authorization": "Bearer <<YOUR LINE TOKEN>>"
}
```

- http request node
 - Method: POST
 - O URL: https://notify-api.line.me/api/notify

- Add debug node to see the output.
 - You can inspect the error.
- Try injecting to see if the notification.

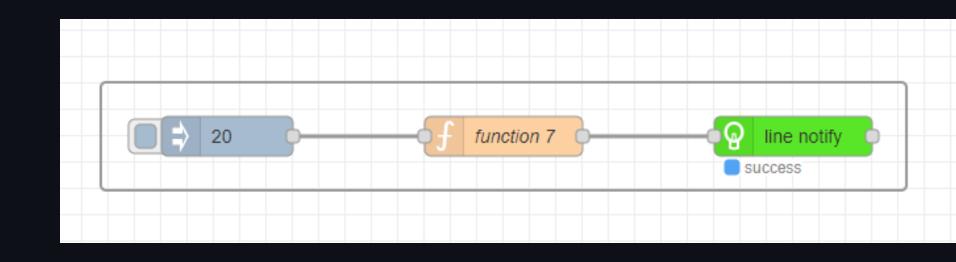

Line Notify Node

Easier Implementation

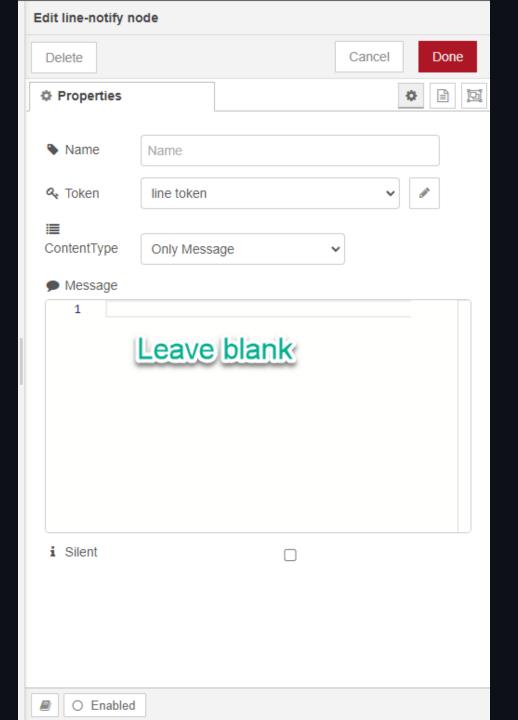

Setup

Install node-red-contrib-line-notify

line notify node

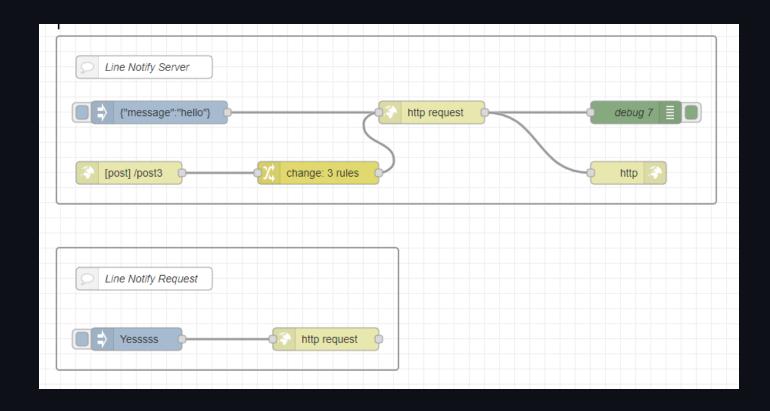

function node

```
const date = new Date();
const datestring = date.toLocaleDateString();
const timestring = date.toLocaleTimeString();
// Customize your message here
const payload = `
  วัน: ${datestring}
  เวลา: ${timestring}
  ค่า: ${msg.payload}
msg.payload = "\n" + payload.trim();
return msg;
```

Extra

- Make a server that send the message to Line.
 - The message comes from the POST request.
