SCADA

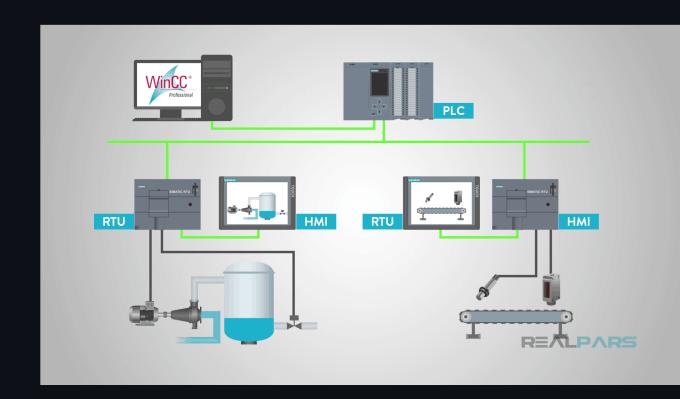

Supervisory control and data acquisition

SCADA

- A system of software and hardware elements that allows industrial organizations to:
 - Control industrial processes locally or at remote locations
 - Directly interact with devices such as sensors, valves, pumps, motors, and more through human-machine interface (HMI) software
 - Monitor, gather, and process real-time data
 - **Record** events into a permanent storage.

Architecture

- PLC (Programmable Logic Controller) and/or RTU (Remote Terminal Units)
- **HMI** (Human Machine Interface)
- Field devices sensors and actuators
- SCADA computer

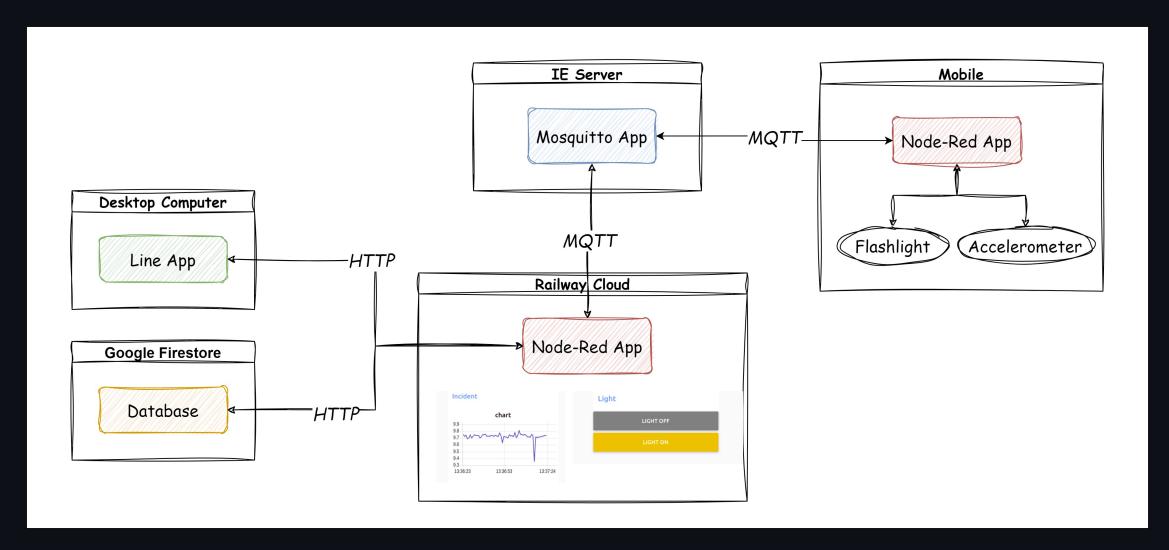

We will come back to this topic later.

• Now, let's learn about a control system by making a DIY "SCADA".

Project Demo

Link

Diagram

Components

- Node-Red App running on a cloud server (Railway Cloud)
 - Collect sensor data
 - Displaying sensor data
 - Notifying operator of the incident through Line App (on a desktop computer)
 - Writing and reading from Database (on Google Firestore)

Components (cont)

- Node-Red App runnign on mobile
 - Receive command to toogle a flashlight
 - Process and send accelerometer data
- Mosquitto App running on a cloud server (IE Server)
 - Receiving and broadcasting data from and to both Node-Red App.

Protocol

- HTTP (Hypertext Transfer Protocol)
 - Basically the "internet" protocol
- MQTT
 - Leading open source protocol for connecting internet of things (IoT) and industrial IoT (IIoT) devices.

Comparison to SCADA components

Component	Function	SCADA Equiv.
Node-Red (Railway)	Collect data	PLC / RTU
	Display data	SCADA computer
	Notify to Line	SCADA computer
	Write to Database	SCADA computer

Comparison to SCADA components

Component	Function	SCADA Equiv.
Node-Red (Mobile)	Control sensors	PLC / RTU
Accelerometer	Measure acceleration	Sensor
Flashlight	Light	Actuator
